

Slack DevOps Integration Engineer

About this Job

Does DevOps, AI, Machine Learning interest you? Love Slack? Join us on the leading edge at RigD. You'll work with passionate industry experts building an AI powered automation solution. It brings AI/ML and automation together in Slack so organizations can resolve costly customer impacting issues way faster than before.

We do this by helping companies swiftly and smoothly perform basic activities in Slack and build automation to connect those activities into a flow. Our AI looks for patterns of repeat activity and builds the automation for you. You will cut minutes of the work without a thought!

We are looking for highly motivated individuals interested in true startup experience. We're talking Pied Piper style – but with an experienced team that knows how business works! If you're into that and you have these skills, then this job is for you.

- Good level of Python coding expertise
- Prior work integrating with REST APIs
- Expertise in some of the following tools
 - Kubernetes
 - Jira (Software and Service Desk)
 - GitHub
 - Jenkins
 - SumoLogic
 - Splunk
 - Elastic Search & Kibana
 - ServiceNow
 - VictorOps
 - OpsGenie
 - Prometheus
 - Grafana
 - ZenDesk

Come help us integrate these leading DevOps tools into our Slack App and AI automation framework. You'll get exposure to Kubernetes, Serverless, NLP, a variety of machine learning models along the way.

This is a contract position with considerable equity and the opportunity to become permanent in the near term. You'll also make some great connections and this experience will serve you well in your career.
